

## Facts about Fahrenheit (F) and Celsius (C)

The United States uses Fahrenheit for temperature. Most countries use Celsius.

Here are some examples :

- Water freezes at **0 °C OR 32°F**
- Room temperature is **20 °C OR 68°F**
- Normal body temperature is **37 °C OR 98.6°F**
- A very hot day is **40 °C OR 104°F**
- Water boils at **100 °C OR 212°F**

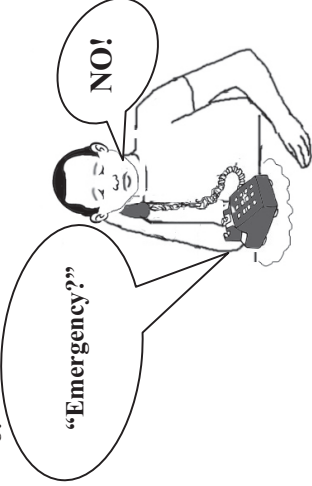

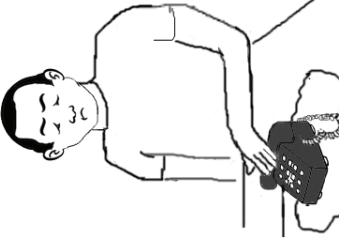

How can you change the temperature?

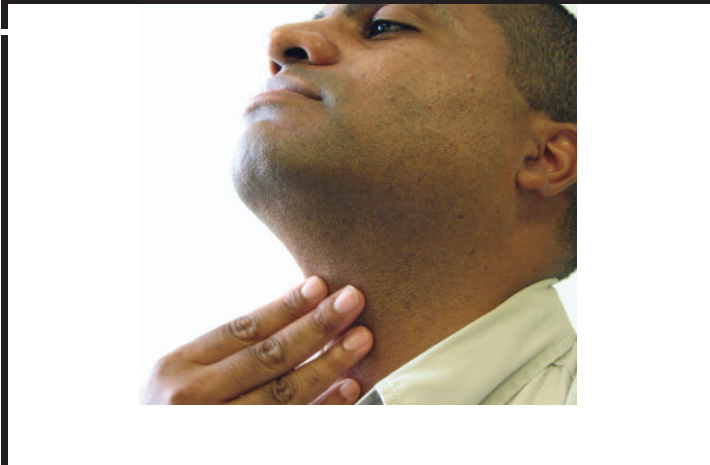

$$^{\circ}\text{C} = (^{\circ}\text{F} - 32) \div 1.8$$

$$\text{For example: } (68^{\circ}\text{F} - 32) \div 1.8 = (36) \div 1.8 = 20^{\circ}\text{C}$$

$$^{\circ}\text{F} = (^{\circ}\text{C} \times 1.8) + 32$$

$$\text{For example: } (20^{\circ}\text{C} \times 1.8) + 32 = (36) + 32 = 68^{\circ}\text{F}$$

## Unscramble

**A** Work with a partner. Cut out the strips. Mix them up. Put the story in the correct order.

**B** Answer the questions.

1. Where is Isabel today? \_\_\_\_\_
2. Does Diego have a cold? \_\_\_\_\_
3. Does Anna have a stomachache? \_\_\_\_\_
4. What's the matter with Isabel? \_\_\_\_\_

1) Poor Isabel! Everyone is

sick! Isabel and her children are at

the health clinic today. Her son,

Diego, has a broken leg. Her daughter,

Anna, has a stomachache. Isabel doesn't

have a broken leg. She doesn't have

a stomachache. But Isabel

has a very bad cold.
